We Need Your Help

Our ongoing education program seeks to raise awareness of Medibands® with all medical personnel and emergency service staff. We endeavor to do this via website, phone contact, trade shows, brochures and PR.

However, we need your help to educate others and to help spread the word so that medical conditions are recognised promptly. If you know of someone or any organisation that would benefit from learning more about Mediband® products, we invite you to send them a link to the Mediband® Education Programme website.

SEND A REFERRAL to a medical personnel from the Mediband® Education Programme website. Visit www.mediband.com/educate for further information.

Medibands® are designed to be easily recognised.

Keep a look out for your patient wearing a Mediband® medical ID bracelet.

Mediband®

EDUCATION

Insure Against Incorrect Diagnosis

It is vital that all medical workers are made aware that their patients may be wearing Mediband® medical ID bracelets. Medibands® are medical awareness products made popular due to their versatility and style. Made from silicone, they are lightweight and easy to identify.

The Mediband® Education Programme was established to ensure that all medical professionals clearly identify Mediband® vital information in times of emergency, thus ensure correct diagnosis and treatment.

Critical Information

Our range includes bracelets with the following: specific conditions and contact numbers written inside and outside the Mediband®; special conditions referring to a patient's wallet card where primary condition(s) and ID, amongst other details are stored.

All products will give you instant and accurate information which can assist in determining correct diagnosis and appropriate treatment. This is **VITAL** information in critical emergency situations.

Education Programme

Medibands® ongoing education programme involves contacting all medical professions, medical workers, ambulance officers, care workers and OH&S personnel to raise awareness of Medibands® and to educate people to look for and recognise that patients may be wearing medical ID.
